TOTAL PIPELINE BREAKDOWN

CUSTOMER	% PIPELINE
US Army	51%
US Air Force	25%
US Marine Corps	9%
US Navy	8%
Joint (COCOM, JS, OSW)	5%
SOCOM	2%

CASH OVERVIEW

Cash on Hand = \$23.3m

Latest Monthly Burn (June) = \$1.66m
~70% on total payroll expenses

TEAM OVERVIEW

61 fulltime employees (incl. signed & pending starts)
44 cleared + 1 in process for clearance

Exec (CEO & CTO) = 2	Mission Success = 10
Eng & Product = 34	Talent = 3
Growth = 10	Biz Ops = 2

BRANCHING OUT ('26 – '27)

We are taking the technological foundations we developed in 2025 and branching them out into new domains and new markets.

Still highly connected and accretive to our foundation, this phase establishes Tyr0S as a logistics **INTEGRATION PLATFORM** and Rune as a logistics **SYSTEMS INTEGRATOR**.

SIMULATION & WARGAMING: Our planning, course of action generation and deep logistics modeling lend themselves perfectly for expansion into modeling & sim and wargaming domains, unlocking large, new customer bases and capture avenues.

UNMANNED VEHICLE INTEGRATION: Our scheduling, load planning and in-transit capabilities are well suited for integration with unmanned cargo vehicle providers across air, ground and sea, targeting integrations for tasking, scheduling and tracking.

SENSOR INTEGRATION: Strong customer demand for solutions that track logistics inventory more precisely. Targeting bulk liquids, ammunition and medical. Explore available partners, off-the-shelf solutions or custom builds.

GROWING ('28 +)

By 2028, we take the software platform and product suite we have proliferated across services for tactical and operational logistics, and start building a generational, global military logistics provider.

By being data-backed, AI enabled and therefore cheaper, faster and more precise, we position ourselves to capture large-scale contracts from legacy providers in a space ripe for disruption.

3P LOGISTICS BROKERING & FLEET MGMT: Rune is positioned as a software, data and AI enabled third party logistics broker (c.f. Flexport) that can capture large scale logistics services contracts and provide trusted, optimal host-nation support (e.g. LOGCAP).

DIGITIZED FLEET MGMT & SUPPLY CHAIN: Rune owns the software backbone and sensor technology that enables global fleet management, fleet visibility (c.f. Samsara) and supply chain tracking (c.f. Altana) to the U.S. and allied militaries.
